

NOW'S the time!

Slurrystore EQIP Hotline

Now's the Time to get your Environmental Quality Incentives Program application and grant questions answered by the new EQIP hotline now available from Slurrystore and Engineered Storage Products Company. Farmers can call the hotline at 1-866-376-EQIP or visit www.Slurrystore.com and click on the EQIP Hotline link.

NEW EQIP HOTLINE
1-866-376-EQIP (3747) • WWW.SLURRYSTORE.COM

The EQIP program is administered by the USDA Natural Resources Conservation Service (NRCS) and provides government-funded assistance for agricultural improvements to promote environmental quality. The EQIP hotline will specialize in the following areas:

WASTE STORAGE (EQIP CODE 313) | MANURE TRANSFER (EQIP CODE 634)

To receive EQIP funding, producers must meet eligibility requirements and file a detailed application for approval.

HERE'S HOW IT WORKS Call the EQIP Hotline with your question. Our hotline specialist will collect some basic information about your operation, detail your question and guide you through the process. Since EQIP rules and regulations may differ from state to state and even county to county, your question may be forwarded to the Authorized Slurrystore Dealer in your area. These experts have a firm handle on the local rules and regulations to consult with you on your question topic. They can also help you determine your potential for EQIP funding and help you complete the EQIP application.

SLURRYSTORE AND EQIP Slurrystore waste management systems are approved by the USDA-NRCS and are eligible for EQIP funding. With the new and tougher ag waste regulations that are being implemented in every state, there has never been a better time to consider a Slurrystore.

THE BEST SOLUTION FOR TODAY'S AGRICULTURAL WASTE MANAGEMENT

A Slurrystore offers several distinct advantages over earthen basins/lagoons and concrete pits. Consider for yourself why "Now's the Time" for Slurrystore.

NOW'S THE TIME
For better environmental and community stewardship

A Slurrystore is an above-ground positive containment structure that minimizes the risk of run-off and groundwater pollution that may occur with earthen basins/lagoons, stacks, concrete pits or other storage methods. It is engineered to the highest standards with its glass-fused-to-steel construction and robust reinforced concrete floor and foundation design.

NOW'S THE TIME
For more reliable and convenient manure storage

A Slurrystore is more convenient, durable and safer than earthen basin/lagoons and concrete pits. It is easy to fill and clean. An optional contaminant detection system is available.

NOW'S THE TIME
For odor control management

Slurrystore helps reduce odor – in some cases up to 90 percent. The above-ground construction produces a "chimney effect," releasing any odors into higher level air currents. Also, a crust will typically form on top of cattle manure, sealing in odor.

NOW'S THE TIME
For an option that fits new manure management regulations

New state, county and local regulations are continually being put into effect. Whether they address handling, odor, run-off or application, a Slurrystore provides the best and most conforming storage option available.

NOW'S THE TIME
For better agitation

No other manure storage option allows for better and more complete agitation than a Slurrystore. Using new and improved deluxe agitation systems, Slurrystore pumps and nozzles blend a consistent nutrient mix throughout the structure. A Slurrystore essentially works as a fertilizer mixer. (See Figure 1)

NOW'S THE TIME
For greater flexibility in waste management

A Slurrystore can be the foundation of a flexible waste management system. It can also be part of more advanced systems that decant nutrients or anaerobically produce energy with specifically designed Slurrystore Digester tanks. Slurrystore also offers flexibility in expansion plans, allowing operations to increase in size.

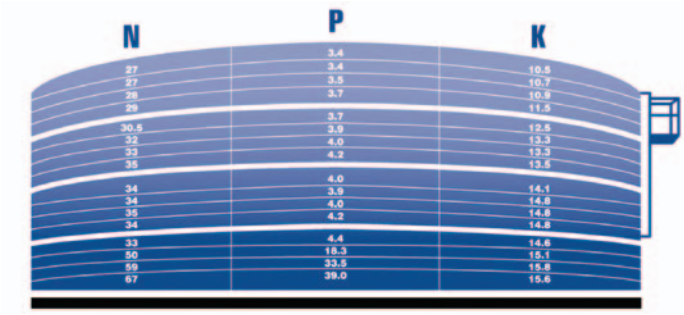

NOW'S THE TIME
For better use of EQIP dollars

A Slurrystore is eligible for EQIP grant dollars. Call the 1-866-377-EQIP hotline or visit your Authorized Slurrystore Dealer. They provide assistance with the application process and help maximize your grant request.

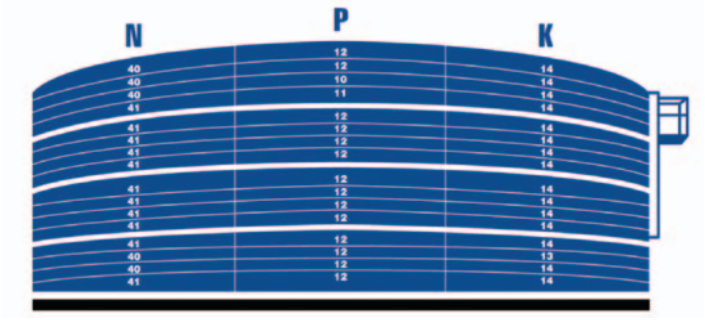

PROPER AGITATION = MAXIMUM NUTRIENT CONSISTENCY = SAVINGS

Compare the pounds of nutrients per 1000 gallons*
(Measured at one foot increments from the top of a Slurrystore structure)

Before Agitation
Nutrient Concentration is Inconsistent

After Agitation
Nutrient Concentration is Homogeneous

*Based on actual results achieved in Manitoba, Canada, field tests.

NOW'S THE TIME:

There truly is no better option for agricultural waste management than a Slurrystore. Slurrystore systems are engineered to the highest standards and conform to USDA-NRCS regulations. It is important to answer the following questions:

- What specification, standard or code does your current manure storage system comply with?
- What potential liability are you exposing yourself to with your current storage system if it is not built to a standard that ensures positive containment?

More importantly,
• Isn't it time you looked into a Slurrystore?
